

TraceAuthenticate™

Unparalleled secure Internet transactions and commerce

▶ BELIEVE WHAT YOU CANNOT SEE

TraceAuthenticate™ was developed with the end user in mind by creating an easy-to-setup and manage authentication appliance that will allow your customers to select the level of security that is best for them. While most customers are satisfied with multi-factor authentication which meets the guidelines of regulators such as FFIEC, there are others that demand the added security of stronger authentication. Using TraceAuthenticate's hybrid technology, you and/or your customer can simply choose what is best for them.

For business, TraceSecurity maintained the same mindset. With an initial setup that takes less than half an hour, the TraceAuthenticate appliance has an easy-to-use administrator interface that takes the hassle out of authentication management. And with no key fobs, bingo cards or other expensive or hard-to-manage devices, it is no wonder why TraceAuthenticate is the only multi-factor solution recommended by the Credit Union National Association.

Authenticate without the need for software, cookies, key fobs and other hardware. Authenticate from any computer anywhere!

TraceAuthenticate incorporates a proprietary engine to enhance the security of the current application. In addition, TraceAuthenticate adds the ability to access the application even without being at your computer.

Should account information become compromised, the added layer of TraceAuthenticate will protect your personal information and assets safely. Threats that arise from basic user name and password are now a thing of the past.

KEY BENEFITS

Provides Protection without Constant Updating

- Quick and easy setup
- No database import requirements
- Built-in artificial intelligence recognizes the user at login

Simple End User Management

- No need to distribute and manage tokens, secure cards, key fobs, or other devices
- All of the required technology is included with the appliance

Remotely Accessible

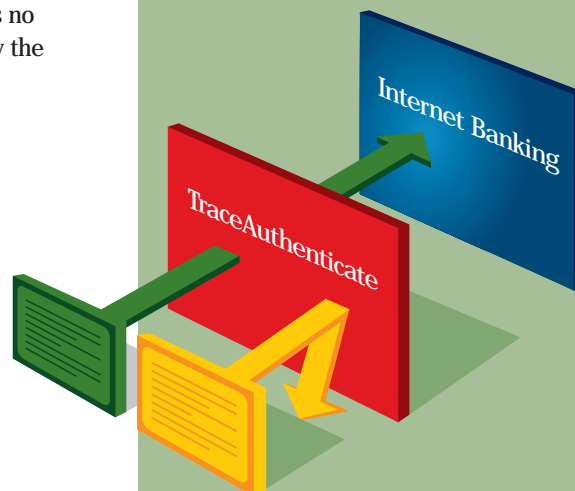

- Built-in feature allows for authenticated access from anywhere at all times

Open Product Integration Interface

- Supports all major operating systems
- Works seamlessly with most online banking applications

Affordable

- Less expensive than traditional two-factor solutions

About TraceSecurity

TraceSecurity is a leading provider of security compliance and risk management solutions. The company helps organizations of all sizes to achieve, maintain and demonstrate security compliance while significantly improving their security posture. Key to TraceSecurity's success is the company's comprehensive patent-pending methodology that helps clients address all of the critical components of a successful security compliance program: people, process and technology.

TraceSecurity delivers its solutions through an integrated software-as-a-service platform backed by expert professional services and comprehensive security awareness programs. The company's flagship offering, TraceSecurity Compliance Manager, is the first comprehensive

solution to automate regulatory compliance audits, board-level reporting, policy management, vulnerability assessment, and employee education and testing. The company's expert professional services include onsite risk assessments, security audits, and social engineering. The security awareness programs include an exhaustive set of standard offerings as well as custom-designed courses. With over 500 clients, TraceSecurity supports the risk management and security compliance efforts of organizations in financial services, healthcare, insurance, government and other regulated sectors.
